

Celebrating 30 Years
1988 - 2018

*"Building the future on the
foundations of the Past"*

Data Analytics, Machine Learning and AI
Jim Collins - IBM

The unprecedented challenges for Finance, driven by change, requires CFOs to digitally reinvent their organizations

Finance organizations need to embrace digital drivers

New focus: Employ advanced analytics across the enterprise

New expertise: Build the right talent for an agile and innovative organization

New ways to work: Digitize services and processes

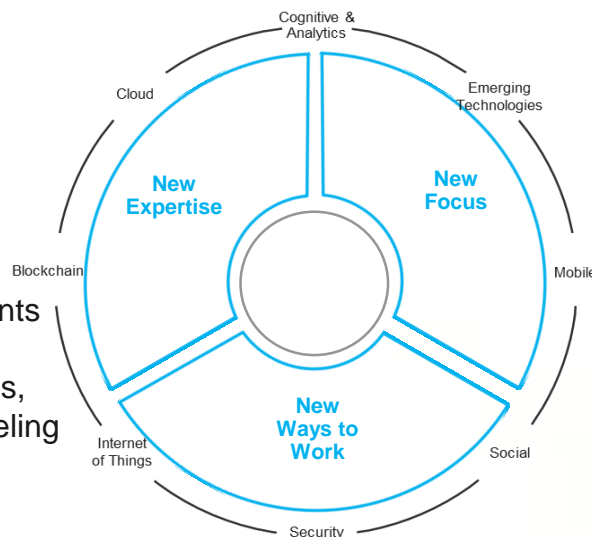

New experiences: Create deeper relationships that business partners desire and want and build experiences that employees desire and want

The most effective Finance organizations digitally reinvent through new focus, new ways to work and new expertise

Digital Reinvention of Finance

New Expertise

- Center of excellence for analytics/cognitive computing
- Management of change associated with Digital Reinvention
- Culture and talent improvements to support digital
- New skills around technologies, data acquisition, mining, modeling and analysis

New Focus

- Enterprise data commonality
- Predictive models
- Connection of front and back office
- Application of analytics and cognitive computing to enterprise decision making for profitable growth

New Ways to Work

- Digital technology foundation
- Analytics, cognitive computing, process automation and blockchain for processes
- Leading practices for order-to-cash (O2C), procure-to-pay (P2P), record-to-report (R2R) processes

Finance organizations need to envision, create, deepen and orchestrate

Envision: Use design thinking to understand business partners, brainstorming ideas and visualizing scenarios

Create: Create pilots using agile development, test them, and deploy them

Deepen: Augment capabilities and continue to build and deploy applications aligned to the target operating model and strategy

Orchestrate: Build a robust team to guide the program, and ensure embrace of holistic reinvention, not a series of point solutions

Pressure is on for Finance organizations to digitally reinvent

1 Long-term, incremental transformation no longer sufficient

Finance should rapidly transform cost structures and allocate more resources to digital technologies and capabilities.

2 Business as usual does not change the thinking about data and being analytically nimble

Finance should address the pace of innovation, data complexity / volume growth and business expectations through the integration of data.

3 No sacred cows - nothing is off the table

Finance should objectively evaluate all transformation levers with shift to digital.

Capabilities Needed to Modernize Your Data Strategy

- **Make Data Simple and Accessible**
- **Build a Trusted Analytics Foundation**
- **Scale Insights On Demand**

Make Data Simple and Accessible

- **Gain Value From Your Data Without Limits**
 - **Adapt current data management to changing business needs**
 - **Leverage data of all types and sources with hybrid data**
 - **Embrace open source technologies and data more securely**

Build a Trusted Analytics Foundation

- **Know Your Data, Trust Your Data, Use Your Data**
 - **Build confidence in your data**
 - **Data integration, replication and quality**
 - **Enable information driven insights**

Scale Insights On Demand

- **Transform Data Into Business Outcomes**
 - Empower Teams
 - Gain Insights
 - Drive Innovation with Analytics

Data Science and Business Analytics makes data simple, accessible and actionable

Descriptive, Diagnostic, Predictive, Prescriptive to plan a course, monitor the business, predict the future, and change the outcome

Drive Innovation
with Analytics

*Validate business
decisions with data*

Cognitive businesses will redefine how decisions are made

AI is the system of the future.

People will define what is to be learned.
System will learn how to learn it.

- Interactive decision making, learning and evidence-based explanations
- A range of techniques including natural language processing, knowledge and planning
- Statistical prediction analysis and pattern recognition to make highly data-driven decisions

Bringing together **man and machine** to help us make better, smarter decisions.

Humans excel at

- Common Sense
- Dilemmas
- Morals
- Compassion
- Imagination
- Dreaming
- Abstraction
- Generalization

AI Systems excel at:

- Pattern Identification
- Locating Knowledge
- Machine Learning
- Eliminate Bias
- Endless Capacity
- Natural Language Understanding

**Today's world is data
rich but insights poor**

Dashboards are a common interface to analytics for most users.

"The greatest danger in using ungoverned dashboards for decision making is in misattributing causality when comparing elements on the dashboard"

Joel Shapiro, "Three Ways Data Dashboards Can Mislead You" – Harvard Business Review
<http://www.tylervigen.com/spurious-correlations>

ANSWERS

IT'S ALL ABOUT
SEARCHING FOR
BETTER
QUESTIONS

**“Judge a man by
his questions
rather than by
his answers.”**

Voltaire

There is a gap between you and AI.

There is a gap between you and AI.

It's time you got over it!

Four misconceptions

A person is shown from the chest up, holding their right hand flat with the palm facing forward in a universal 'stop' gesture. The person's face is partially visible in the background, slightly out of focus. They are wearing a dark-colored top. The text 'AI is for them...not me.' is superimposed in white, bold, sans-serif font across the center of the hand and the person's chest. The background is a light, neutral color with some geometric shapes on the left side.

AI is for them...not me.

The background of the slide is dark grey with several faint, overlapping gear patterns in a lighter shade of grey. The gears are of different sizes and are positioned across the frame, creating a mechanical or industrial aesthetic.

AI is for them...not me.

**AI helps free us from the mundane
so we can do the things that matter!**

A man with dark hair and a beard, wearing a dark blue suit, white shirt, and dark tie, is sitting at a desk. He has his right hand pressed against his forehead, looking down with a frustrated or overwhelmed expression. A laptop is visible on the desk to his left. The background is a blurred office environment with large windows. The text "AI is hard to understand." is overlaid in white, bold, sans-serif font across the center of the image.

AI is hard to understand.

The background of the slide is dark grey with several faint, overlapping gear patterns in a lighter shade of grey. The gears are of various sizes and are positioned across the slide, creating a mechanical or industrial aesthetic.

AI is hard to understand.

**Effective cognitive systems
think a lot like you do.**

A close-up, black and white photograph of a white, articulated robotic hand. The hand is positioned over a laptop keyboard, with its fingers slightly curled as if about to type. The lighting is soft, highlighting the mechanical joints and the smooth surface of the hand. The background is blurred, showing the laptop's screen and body.

AI is not business ready.

Human and Machine

>

Human or Machine

The background of the slide features a dark, textured surface with several large, interlocking gears. The gears are rendered in a lighter shade of gray, creating a mechanical and industrial aesthetic. They are positioned in the background, partially obscured by the text.

AI is not business ready.

**AI was made for today's
business environments.**

A photograph of four business professionals sitting on a row of white chairs against a white brick wall. From left to right: a man in a grey suit holding a tablet, a woman in a light grey suit holding a white cup, a man in a dark suit holding a smartphone, and a woman in a grey blazer and blue jeans holding a laptop. The text "I should wait to see what happens" is overlaid in white with a black outline across the middle of the image.

I should wait to see what happens

All learners begin at day one.

With earlier technologies you might
have waited to start your journey.

A person is seen from behind, sitting on a metal bench in a subway station. They are wearing a dark, patterned coat and a black beanie. A black bag is slung over their shoulder. The background is a blurred train with orange and white stripes, suggesting motion. The floor is a light-colored, polished surface.

With AI, every day you wait,
you're one more day behind.

The background of the slide is dark with a subtle, repeating pattern of interlocking gears. The gears are rendered in a lighter shade of the background, creating a mechanical or industrial aesthetic. The text is overlaid on this pattern.

I should wait to see what happens.

**If you're not moving forward
you're backing up.**

Integrating Business Values with AI/ML

What happens when business goals conflict within decision-making?

How can analytics and optimization deal with conflicting goals?

AI/ML/Cognitive allow people to make more informed decisions.

It's not Man vs. Machine

It's Man and Machine!!

AI: Augmented Intelligence

Thank you!
